### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Pasturczak (U.S. patent no. 2,471,237). The patent to Pasturczak discloses a fluid coupler comprising a female coupler member (10) having a first fluid passageway, a male coupler member (12) having a second fluid passageway, a first valve (54) movably connected to the female coupler member and positioned between an exterior surface of the male coupler member and an interior surface of the female coupler member. The first valve (54) includes a through hole (66) which lines up with an opening (30) in the interior surface of the female coupler member and an opening (92) in the male coupler member to permit fluid flow between the first and second fluid passageways, see Figure 1. The coupler members (10, 12) are held in the connected position of Figure 1 by means of a snap ring (112) and a groove (26). Excessive tension on one of the coupler members will cause the coupling members to separate, breaking the alignment of the passages (66, 30, 92), therein preventing fluid flow between the passageways, col. 6, lines 26-66 and col. 7, lines 41-61.

***Allowable Subject Matter***

Claims 2-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
